

MAGPIE · A FREE GUIDE

Your camera roll is not a filing system.

we've all been there.

One place for event slides, saved carousels, PDFs and links, read and tagged for you by AI, and found again in seconds.

Works with Copilot, ChatGPT, Gemini and Claude.

Build it in about 10 minutes.

No code. Works on your phone and your laptop.

A FREE GUIDE FROM ROYK AI · ROYK.COM

Where good ideas go to disappear

You go to an event, photograph the best slides, and they vanish between holiday photos and screenshots of parking tickets. Sound familiar?

- **Event and presentation photos** buried in a camera roll of thousands.
- **Carousels** saved on LinkedIn and Instagram that you never look at again.
- **PDFs** sitting in Downloads with names like *file_4B31B6FF.pdf*.
- **TikToks and Reels** saved to “watch later”, which means never.

THE FIX

One private place you dump everything into. You don't sort, file or name anything. AI reads what you add, tags it, and finds it for you when you ask.

PICK YOUR ROUTE

Two ways to do it

1

ROUTE 1 · CLAUDE

Build your own Magpie.

A private page with a save box, a visual wall, automatic tags and search. Feels like an app on your phone.

Best for: visual people who save a lot on the go.

2

ROUTE 2 · COPILOT, CHATGPT OR GEMINI

Use a notebook you already have.

Drop your files into a notebook in the AI tool you already pay for, then ask it to tag, sort and find things.

Best for: teams on Microsoft 365 or Google, or anyone who doesn't want to build anything.

Build your own Magpie

Open the Claude app or claude.ai, start a new chat and paste this prompt.

THE MAGPIE PROMPT · COPY AND PASTE

Build me a private "save anything" page like the app mymind, as an artifact I can keep using. Give it one box at the top where I can paste a link, type a note, or add a photo or a file (PDFs, videos and text files), then tap Save. Store everything in the page's database so it's saved across devices, and upload photos and files to the page's own storage. After each save, use Claude to give it a short title, a one-line summary and 3–6 tags. For photos, read any text on them and include the main colours and objects. If I paste a link with a few words after it, tag it from my words. Show everything in a masonry grid, newest first, with a search bar that matches titles, notes, links and tags, plus a row of tappable tag filters. Tapping a card opens it so I can edit my note, re-tag it or delete it. Keep it private to me, clean and calm, and make it work well on a phone. Call it Magpie.

Claude builds the page and shows it as a card in the chat. The first time you save something, it asks permission to use Claude for tagging. Say yes. Want a different look? Just ask in the same chat.

Put it on your iPhone home screen

- 1 Open your page, tap Claude's **Share** button and choose **Copy private link**.
- 2 Paste the link into **Safari** and sign in to Claude if asked.
- 3 Close any Claude panel, then tap **Safari's own Share button** (the square with an arrow).
- 4 Scroll down and tap **Add to Home Screen**. Not there? Tap **Edit Actions...** and switch it on.

Android: open the link in Chrome, tap the three-dot menu, then **Add to Home screen**.

Use a notebook in your AI tool

Each of these lets you collect files in one place and ask AI about them. Set up one notebook called **Magpie** and keep adding to it.

MICROSOFT COPILOT

Copilot Notebooks

In Microsoft 365 Copilot. Available on many Microsoft 365 business and personal plans; features vary by plan.

- 1 Create a new notebook and name it Magpie.
- 2 Add PDFs, Word and PowerPoint files, and slide photos as references.
- 3 Paste the tagging prompt below into the notebook chat.

GOOGLE GEMINI

NotebookLM

Google's free notebook tool at notebooklm.google.com, built on Gemini. Takes PDFs, images, web links and YouTube videos with captions.

- 1 Create a notebook and name it Magpie.
- 2 Add sources: upload PDFs and slide photos, or paste links.
- 3 Paste the tagging prompt below into the chat.

CHATGPT

Projects

In ChatGPT, a Project keeps files and chats together. File limits depend on your plan, so the free plan suits a small collection.

- 1 Create a new Project and name it Magpie.
- 2 Add your PDFs and slide photos to the project files.
- 3 Paste the tagging prompt below into a chat inside the project.

THE TAGGING PROMPT · WORKS IN ALL THREE

Go through everything I've added. For each item give me a short title, one line on what it's about and 3–6 tags. Read any text in images and slides. Then group everything by theme in a simple list. From now on, when I ask "find...", search my files and point me to the right ones.

Then just ask: “Find everything about pricing” or “What did I save from the conference?”

FOR EVERY ROUTE

What to save, and how

EVENT AND PRESENTATION PHOTOS

Add the photo straight from your camera roll. AI reads the slide text, so these work brilliantly in every tool.

CAROUSELS

Screenshot the slides, or download the PDF version, and add it.

PDFS AND DOCUMENTS

Add them from your Files app or Downloads. In Route 1, export Word or Excel files as PDF first.

TIKTOKS, REELS AND YOUTUBE

Copy the link and add a few words about it. AI can't watch most videos, so your words are what it tags. NotebookLM can read YouTube videos that have captions.

QUICK THOUGHTS

Type a note. In Route 2, keep a running “Magpie notes” document in the notebook.

GOOD TO KNOW

A few honest limits

- None of these appear in your phone's share menu as a one-tap save, so it's add or copy and paste.
- Notebooks have limits on how many files you can add, depending on your plan. Start a new notebook each year if you fill one.
- Work stuff? Check your company's AI policy before uploading anything confidential.
- Features and limits change often. If a step looks different, ask the AI tool itself how to do it.

AI without the jargon.

no buzzwords, promise.
